GENERAL SERVICES ADMINISTRATION		

Per our conversation today, I wanted to notify you and the District Office that you and your fellow staff are welcome to accompany me on a site visit to proposed well sites (2) for the Elk Hills Power Project. We will be leaving from my hotel, the Doubletree on the morning of June 27th, (Tuesday). The consultants will arrive and lead us there. The site visit will involve examining and identifying certain geological aspects which involved much discussion during the UIC permitting process as well as discussing drilling and construction of the wells. The proposed site is to be set within the exterior boundaries of the Elk Hills field. I am sorry to be so vague on the exact times, but I expect to leave approximately 9am and be at the site for 3-4 hours. I will know more of the schedule later this week.

If there is enough time, I would like to visit the nearby site for the La Paloma proposed site. It is near McKittrick, close to the intersection of Reserve Road and Skyline Rd. They expect to begin drilling and construction within months.

If anyone is free to attend that morning and early afternoon, please notify me in advance at my office phone at (415) 744-1819 or the evening of the 26th or morning of the 27th I can be reached at the hotel (as well as my voice mail at the San Francisco office).

If there are any other issues you want to discuss, please let me know so I can arrange to meet with you.

Thank you,

George Robin
